The **PATRIOT** is an upgraded modular wheeled combat tactical vehicle that features excellent mobility in difficult terrain thanks to the unique TATRA chassis. It offers wide range of mission kit and armament choices - remotely or manually controlled machine guns, grenade launchers or anti-tank guided missiles.

Level of ballistic anti-mine protection of the vehicle with integrated weapon systems allows uninterrupted conducting a full-fledged combat action at low-intensity conflicts. Installed and demountable weapon systems, which could also be used outside of the vehicle, provide great firepower and increase the defense capabilities of the vehicle crew. Design and technical parameters of the vehicle are according to all STANAG standards applicable for this type of military equipment.

FIRE RESCUE

VARIABLE ARMAMENT

Thanks to its robust construction and high payload the **PATRIOT** offers a capability to bear a wide range of weapon systems, crew equipment and vehicle accessories. The roof offers a loadability of up to 250 kg or 500 kg when reinforced. That allows for installation of many systems for enemy engagement and vehicle protection.

RELIABLE IN ALL CONDITIONS

PATRIOT is designed to operate in different climatic and logistical conditions and is built to last.

The result is a heavy duty vehicle fit to become a first choice for any land force unit around the world. The platform was tested in hot desert as well as harsh winter conditions.
